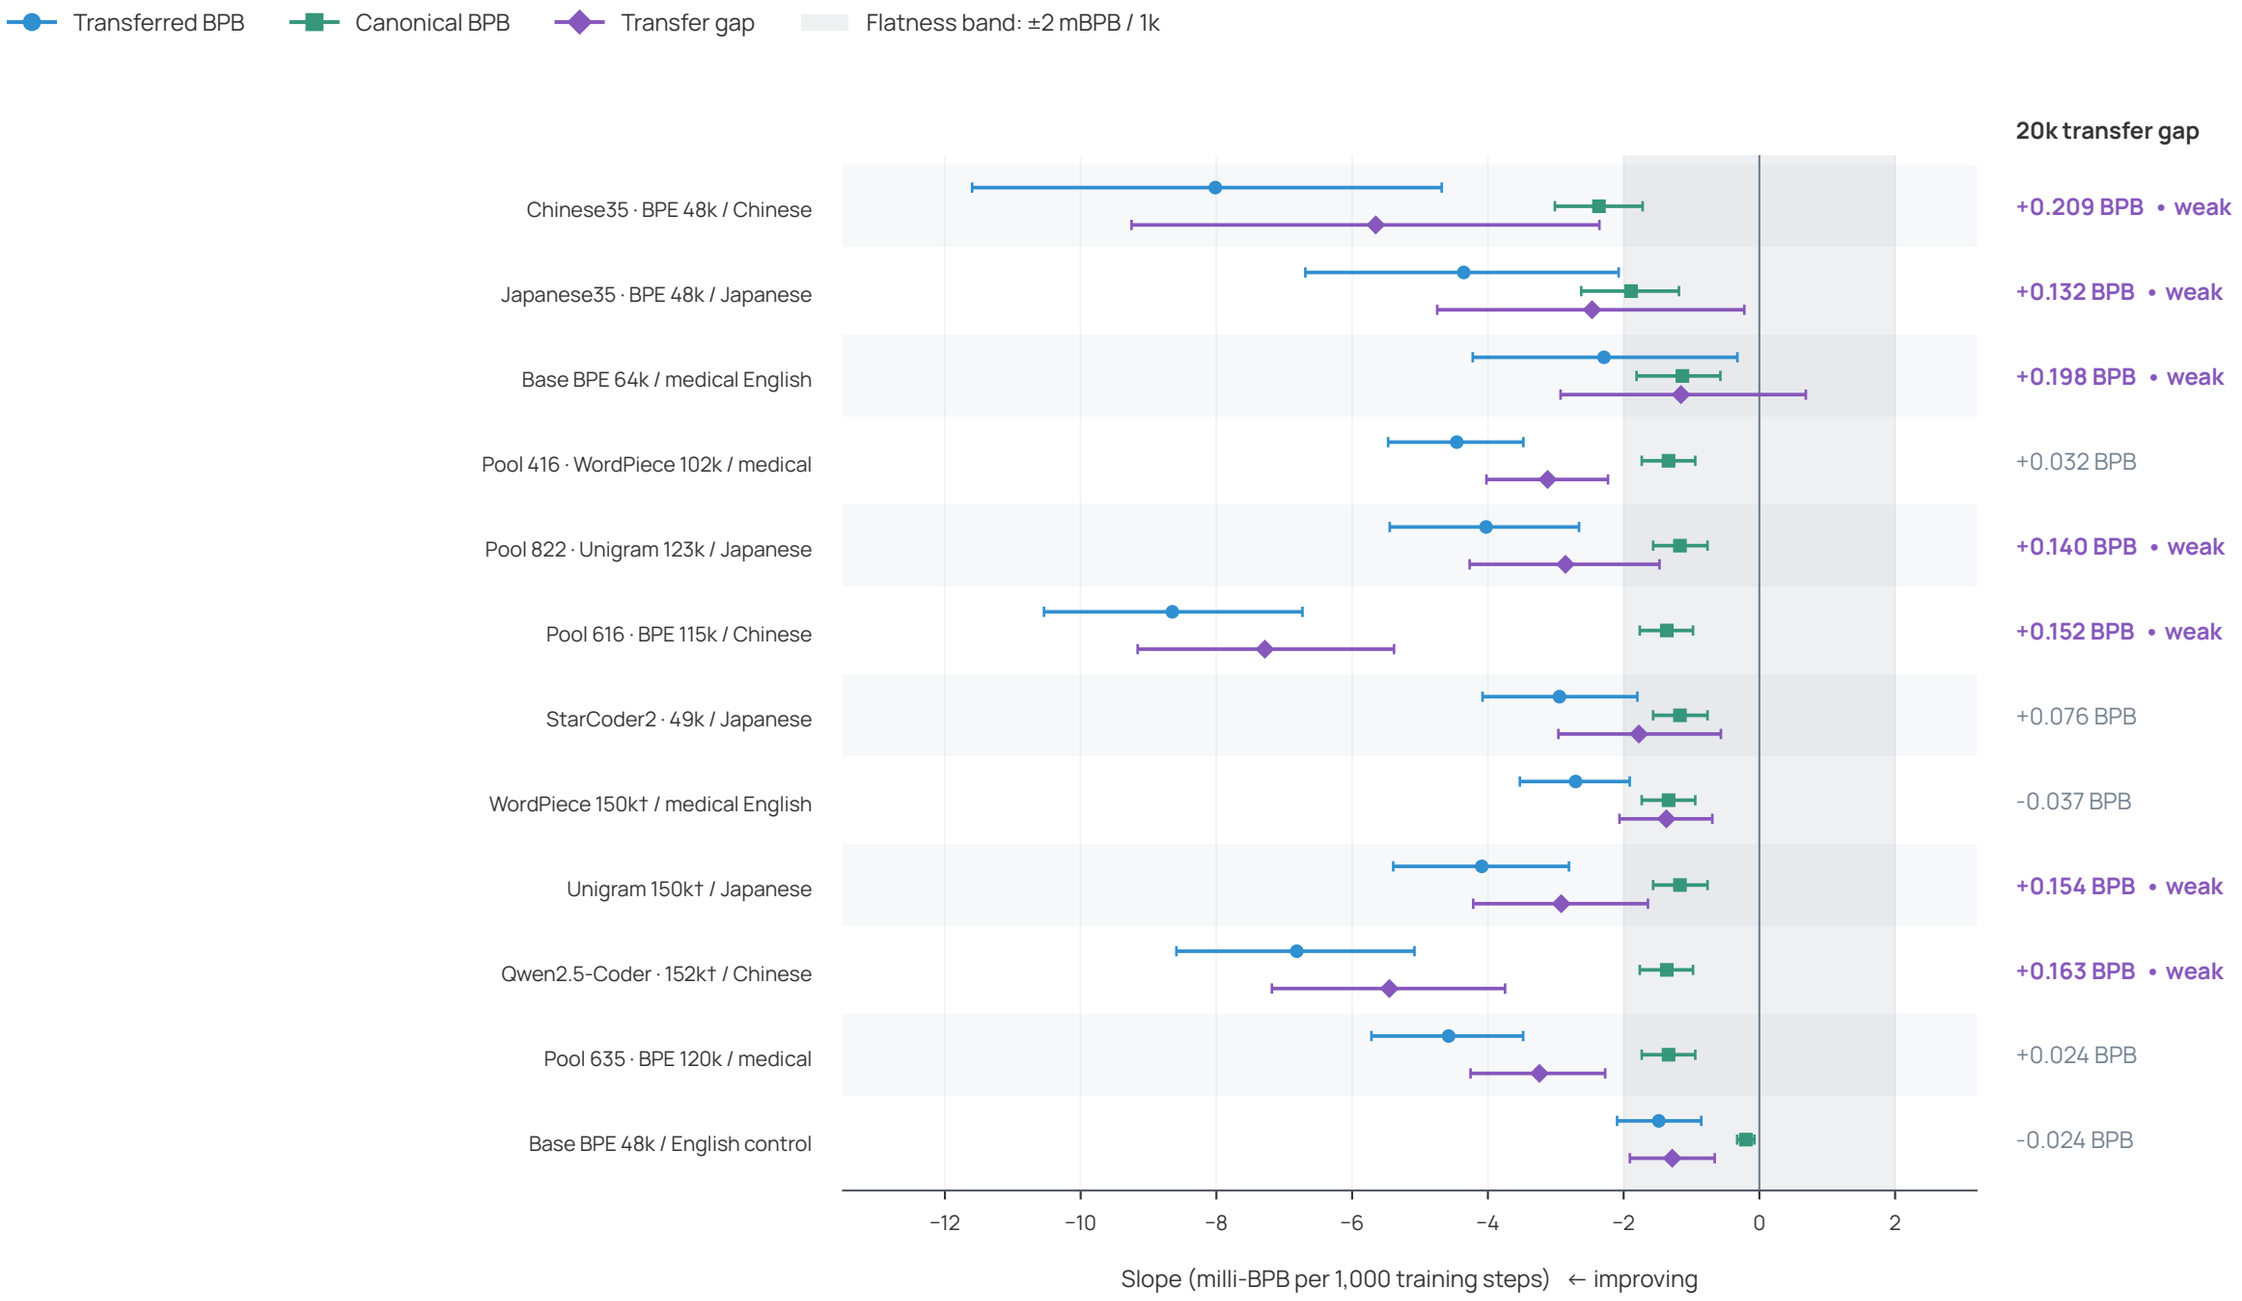
No strict transfer plateau established by 20k

Paired slope fits across all 11 checkpoints from 15k–20k · 95% source-document cluster intervals



A strict practical plateau requires the entire purple interval inside the shaded band. None of the seven weak cases qualifies.

All seven weak cases still improve in absolute transferred BPB. A residual gap alone does not establish a training wall.

† Outside the training vocabulary range. Intervals describe text variation for one training seed; per-case inference.
